**NATIONAL
SENIOR CERTIFICATE**

GRADE 11

NOVEMBER 2019

LIFE SCIENCES P2

MARKS: 150

TIME: 2 ½ hours

This question paper consists of 14 pages.

INSTRUCTIONS AND INFORMATION

Read the following Instructions carefully before answering the questions

1. Answer ALL the questions.
2. Write ALL the answers in the ANSWER BOOK.
3. Start EACH question on a NEW page
4. Number the answers correctly according to the numbering system used in this question paper
5. Present your answers according to the instructions of each question.
6. ALL drawings should be done in pencil and labelled in blue or black ink
7. Draw diagrams and flow charts ONLY when requested to do so
8. The diagrams in this question paper may NOT necessarily be drawn to scale
9. The use of graph paper is NOT permitted.
10. Non-programmable calculators, protractors and compasses may be used.
11. Write neatly and legibly.

SECTION A

QUESTION ONE

1.1. Various options are provided as possible answers to the following questions. Choose the correct answer and write only the letter (A – D) next to the question number (1.1.1. – 1.1.10.) in your ANSWER BOOK, for example 1.1.11. D.

1.1.1. Disease-causing agents are called ...

- A. Antibiotic
- B. Vaccines
- C. Antibodies
- D. Pathogens

1.1.2. Mushrooms are a type of fungus. What characteristics of fungi makes them different from plants?

- A. Fungal cells are eukaryotic
- B. Fungi are multicellular
- C. Fungi are heterotrophic
- D. Fungi have cell walls

1.1.3. The diagram below represents a bacterial cell.

Which of the following represent parts 1, 2 and 3?

- A. Plasmid, flagellum, capsule
- B. Flagellum, capsule, plasmid
- C. Plasmid, capsule, flagellum
- D. Capsule, plasmid, flagellum

downloaded from Stanmorephysics.com

1.1.4. In gymnosperms pollination is exclusively by ...

- A. Animals
- B. Water
- C. Wind
- D. Insects

1.1.5. The part of the flower which becomes the fruit is the ...

- A. Petals
- B. Ovary
- C. Ovule
- D. Anther

1.1.6. The diagram shows the structure of a flower.

Where does pollination and fertilisation take place?

	Pollination	Fertilisation
1	X	Y
2	Y	X
3	X	Z
4	Z	Y

- A. 1 B. 2 C. 3 D. 4

1.1.7. Name the microorganism that is not classified in a kingdom.

- A. Virus
- B. Fungus
- C. Bacterium
- D. Protozoa

1.1.8. The short – lived immunity that mothers pass to their babies is called immunity.

- A. Passive
- B. Maternal
- C. Innate
- D. Active

1.1.9. Using natural resources so that they are not depleted.

- A. Conservation
- B. Sustainable use.
- C. Poaching
- D. Deforestation

1.1.10. Which of the following is present in the Bryophytes?

- A. Seeds
- B. Xylem
- C. Spores
- D. Flowers

(2x 10 = 20)

1.2. Give the correct biological term for each of the following descriptions.

Write only the term next to the question number (1.2.1-1.2.10) in the ANSWER BOOK.

1.2.1. An organism without a true nucleus

1.2.2. The type of alimentary canal which stretches from the mouth to the anus

1.2.3. Type of asexual reproduction in which a bacteria splits into two, as in mitosis.

1.2.4. Substances used to stimulate the production of antibodies and provide immunity against one or several diseases

1.2.5. A process in biotechnology that is used to convert sugar into alcohol and CO₂

1.2.6. The increase in the concentration of nutrients in an aquatic ecosystem, which leads to an increase in primary producers such as algae

1.2.7. The group of organisms such as bacteria and fungi that recycle nutrients in dead plants and animals

1.2.8. Cultivation of plant populations of a single species.

1.2.9. Viruses that infect bacteria.

1.2.10. The differentiation of the anterior end of an animal into a definite head.

1 x 10 (10)

1.3 Indicate whether each of the descriptions in COLUMN I applies to **A ONLY**, **B ONLY**, **BOTH A AND B** or **NONE** of the items in COLUMN II. Write **A only**, **B only**, **both A and B** or **none** next to the question number (1.3.1-1.3.3) in the ANSWER BOOK.

COLUMN I	COLUMN II
1.3.1 Naked seeds	A: Gymnosperms B: Angiosperms
1.3.2 Site constructed to dispose waste	A: Reservoir B: Landfill
1.3.3 Gametophyte is dominant.	A: Ferns B: Mosses

(3 x 2) (6)

1.4 The diagram below is a cladogram of plant evolution.

- 1.4.1. Identify the plant divisions labelled **A**, **B**, **C** and **D**. (4)
- 1.4.2. Name the evolutionary features at **W** and **X**, respectively, that distinguishes:
- (a) Mosses and ferns (1)
 - (b) Cone-bearing plants and flowering plants (1)
- 1.4.3. Both cone-bearing plants and flowering plants are seed-bearing plants. What is the collective name used for seed-bearing plants? (1)

- 1.5. Chlorofluorocarbon (CFC) has unfortunately caused considerable damage to the ozone layer, resulting in the formation of big 'holes'. Study the graph below showing the extent of damage (area of the 'hole') in the Antarctic ozone layer and answer the questions that follow.

1.5.1. During which year was the 'hole' in Antarctic area the:

(a) Largest?

(1)

(b) Smallest?

(1)

1.5.2. What was the area of the 'hole' (million km²) in the years:

(a) 2000 and

(1)

(b) 2005?

(1)

1.5.3. Suggest THREE solutions to ozone depletion.

(3)

[7]

TOTAL SECTION A: 50

SECTION B

QUESTION 2

2.1 Figures A, B and C below represent different phyla of animals

A

B

C

2.1.1. Identify the phylum represented in figures A, B and C. Write the letter with the correct phylum.

(3)

2.1.2. What type of symmetry does figure A have?

(1)

2.1.3. Give ONE benefit of the type of symmetry mentioned in QUESTION 2.1.2.

(1)

2.1.4. Which figure(s) has/have the following characteristics?

Write only the letters A, B or C for example 2.1.4(e) D

- (a) Triploblastic
- (b) Dorso-ventrally flattened
- (c) Cephalisation
- (d) Coelomate

(6)

2.1.5. Give ONE advantage of having a high surface area to volume ratio for animals.

(1)

2.1.6. Draw a diagram of a cross section of a triploblastic body plan labelling each tissue layer, then indicate what each tissue layer gives rise to.

(6)

downloaded from Stanmorephysics.com

2.2.

Garlic is known to have the ability to fight bacteria and viruses. It is known to be effective against a wide range of bacteria and has the ability to combat the common cold. The antimicrobial substance in garlic is called *allicin*. To maintain the antibacterial properties of garlic, it must be consumed or applied as raw garlic because cooking will destroy the *allicin*.

Scientists wanted to investigate the effectiveness of garlic in killing bacteria. They conducted the experiment as follows:

- They used three petri dishes prepared with blood agar and stored these in a refrigerator.
- Before the start of the experiment, they removed the petri dishes from the refrigerator to allow them to reach room temperature.
- They prepared three test specimens and labelled them as described below:
 - The three test tubes were labelled **A, B and C**.
 - The contents of the test tubes were measured and mixed as shown in the table below:

Test tube	Contents of the test tubes		
	100 ml milk	5 ml <i>E.coli</i> bacterium	Garlic extract
A	√	X	X
B	√	√	X
C	√	√	√

- The petri dishes were labelled **A, B and C**.
- They removed the lid in petri dish **A** and used the syringe to extract 10 ml of the sample from test tube **A** and placed it in the centre of petri dish **A**.
- In the same way, using a new syringe a 10 ml sample was extracted from test tube **B** and placed in petri dish **B** and the procedure was repeated for petri dish **C**.

- The petri dish lids were replaced and the petri dishes were stored in a cool and shaded place
 - The diameter of the *E.coli* colony was measured every day for 5 days and recorded in the table below

Petri dish	Diameter of bacteria colony (mm)				
	Day 1	Day 2	Day 3	Day 4	Day 5
A	0	1,7	3,0	4,6	7,1
B	0	4,2	8,4	15,1	36,5
C	0	0	0	0	0

2.2.1. State:

- The independent variable (1)
- The dependent variable (1)
- Two factors that need to be controlled to improve validity (2)

2.2.2. Use the information from the table to draw THREE line graphs showing results of petri dish A, B and C (6)

2.2.3. Explain why the petri dishes were kept in the fridge before the start of the experiment. (2)

2.2.4. Describe and explain the results obtained in Petri dish C (3)

(15)

2.3. Study the diagrams of the structures of two flowers below :

2.3.1. Provide labels for D, E, F. (3)

2.3.2. Which flower (A or B) is probably pollinated by insects ? (2)

2.3.3. Which flower's (A or B) actual size is bigger ? (2)

(7)

[40]

QUESTION THREE

3.1. Figure 1 below shows the averages of carbon dioxide concentration in the atmosphere since January 2009, as measured at the Mauna Loa Observatory in Hawaii.

Figure 1: Average carbon dioxide concentration in the atmosphere since January 2009, at Mauna in Hawaii

- 3.1.1. Describe how deforestation could lead to an increase in the carbon dioxide concentration in the atmosphere. (2)
- 3.1.2. Mention ONE human activity that might have led to the increase in carbon dioxide concentration as seen in the graph. (1)
- 3.1.3. What was the carbon dioxide concentration in the atmosphere in July 2012? (2)
- 3.1.4. What is the dependent variable in this investigation? (1)
- 3.1.5. Explain how the excess carbon dioxide in the atmosphere could lead to climate change (4)
- 3.1.6. Mention ONE way in which humans can reduce the amount of carbon dioxide released into the atmosphere. (1)

[11]

3.2. Read the extract below.

A new study in Kuala Lumpur showed that hunting wild animal for food and recreational sports like hiking and mountain biking pose the two biggest threats to the world's protected areas.

Ten researchers studied data collected over the last decade by managers at about 2 000 protected areas, including untouched forests and national parks or reserves.

They found out that hunting posed the biggest threat in developing countries, while recreational activities such as quad-biking, cross-country skiing, mountain biking, hiking and even dog-walking were most damaging to protected areas in more wealthy nations.

The study showed that the hunting of 'wild meat', such as birds, insects, monkeys and snakes occurred in 61% of all areas. The animals are often sold to meet the demands for food or medicine in urban areas. The increase in the number of wild animals being hunted is partly because of an increase in urban demand - big cities and towns are growing and the demand for wildlife to eat is growing.

Another factor is that the road networks are expanding into forest areas, making them more accessible.

[Adapted from an article 'From hunting to hiking: biggest threats to protected areas identified, Reuters, 2018)

- 3.2.1. What is the illegal hunting and killing of animals called? (1)
- 3.2.2. Give TWO reasons for the increase in the number of wild animals being hunted. (2)
- 3.2.3. Explain how the increase in the killing of wildlife will influence the environment. (3)
- 3.2.4 Suggest TWO possible solutions to each of the following threats:
 - (a) Over-hunting (2)
 - (b) Recreational activities (2)

[10]

downloaded from Stanmorephysics.com

3.3. The pie chart below represents the various sources of energy in South Africa and their contribution in the total primary energy supply.

**Total Primary Energy Supply in South Africa
in 2012**

- 3.3.1. Determine the value of X. Show ALL calculations. (3)
- 3.3.2. Name the flammable natural gas that is produced in landfill sites. (1)
- 3.3.3. Give TWO ways in which the gas mentioned in QUESTION 3.3.2 is useful to humans. (2)
- 3.3.4. Name TWO alternative energy sources that make up the 2% of 'other sources'. (2)
- 3.3.5. Describe how the mining of coal impacts on biodiversity in South Africa. (3)

[11]

- 3.4. Study the diagram below about invasive alien plants in South Africa. It is estimated that they cover 10 million hectares (ha) in South Africa. Every year they use approximately 3,3 billion cubic metres (m^3) of water more than the amount of water used by indigenous plants.

- 3.4.1. Differentiate between *alien plants* and *indigenous plants*. (2)
- 3.4.2. Describe the impact on **water quality** if alien plants cover such a large area of South Africa as shown in the picture above. (4)
- 3.4.3. Define and differentiate between *biological control* and *chemical control* of invasive alien plants. (2)
- [8]

TOTAL SECTION B:

SECTION C

QUESTION FOUR

- 4.1 Write an essay in which you explain what is meant by the concept of food security. Describe also the ways in which poor crop farming practices pose a threat to food security in South Africa. Finally mention how genetically modified food may help to address the problem of food shortage.

Content (17)

Synthesis (3)

(20)

NOTE: NO marks will be awarded for answers in the form of flow charts or diagrams.

TOTAL SECTION C: 20

GRAND TOTAL: 150
