## INVESTIGATING COMPOUND ANGLES AND THEREFORE, DOUBLE ANGLES.

## QUESTION 1

1.1. In the following diagrams, $A \hat{B} D=y, D \hat{B} C=x, E \hat{F} H=y, E \hat{F} G=x$ and $P \hat{Q} S=S \hat{Q} R=x$

Write each of the following in terms of $x$ and/ or y
1.1.1 $A \hat{B} C$
1.1.2 $H \hat{F} G$
1.1.3 P $\hat{Q} R$
1.2 In the table below, different methods are used by learner X and learner Y to answer given questions. Study the table and answer the questions that follow:
1.2.1 Redraw the table in your answer book and use a calculator to complete it.

| Learner X |  |  | Learner Y |  |  |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Question | Working | Answer | Question | Working | Answer |
| $\cos \left(45^{\circ}-15^{\circ}\right)$ | $\cos 30^{\circ}$ | $\frac{1}{2}$ | $\cos \left(45^{\circ}-15^{\circ}\right)$ | $\cos 45^{\circ}-\cos 15^{\circ}$ | $\frac{-\sqrt{6}+\sqrt{2}}{4}$ |
| $\cos \left(150^{\circ}-30^{\circ}\right)$ | $\cos 120^{\circ}$ |  | $\cos \left(150^{\circ}-30^{\circ}\right)$ | $\cos 150^{\circ}-\cos 30^{\circ}$ |  |
| $\sin \left(150^{\circ}+60^{\circ}\right)$ |  |  | $\sin \left(150^{\circ}+60^{\circ}\right)$ |  |  |
| $\cos \left(90^{\circ}-150^{\circ}\right)$ |  |  | $\cos \left(90^{\circ}-150^{\circ}\right)$ |  |  |
| $\sin \left(60^{\circ}-300^{\circ}\right)$ |  |  | $\sin \left(60^{\circ}-300^{\circ}\right)$ |  |  |

1.2.2 Are the answers obtained by learner X the same as that of learner Y for the same question?
1.2.3 Whose method do you think is mathematically correct?
1.2.4 Give a reason why you think there is a difference in the answers.
1.3 Consider the sketched unit circle. By the definition of trigonometric functions, the points P and Q on the terminal sides of angles $\alpha$ and $\beta$ are labelled as shown in figure below.

Use the distance formula to show that: $\mathrm{PQ}^{2}=2-2(\cos \alpha \cos \beta+\sin \alpha \sin \beta)$
1.4 Consider $\triangle \mathrm{POQ}$ in the sketehed above.

Now place angle $(\alpha-\beta)$ in standard position and label the point $B$ on the unit circle corresponding to the terminal side of angle $(\alpha-\beta)$, as shown in the figure alongside.

Use the distance formula to show that:

$\mathrm{AB}^{2}=2-2 \cos (\alpha-\beta)$
1.5 Use 1.2 and 1.3 above to prove that $\triangle \mathrm{POQ} \equiv \triangle \mathrm{BOA}$
1.6 Hence, compare sides PQ and AB and write a conclusion about $\cos (\alpha-\beta)$.
1.7 Use $\cos (\alpha-\beta)$ to derive a formula for $\sin (\alpha-\beta)$. (Hint: use co-function)
1.8 By applying the compound angles and without using a calculator.

Determine the value of $\sin 105^{\circ}$
